1. vmstat

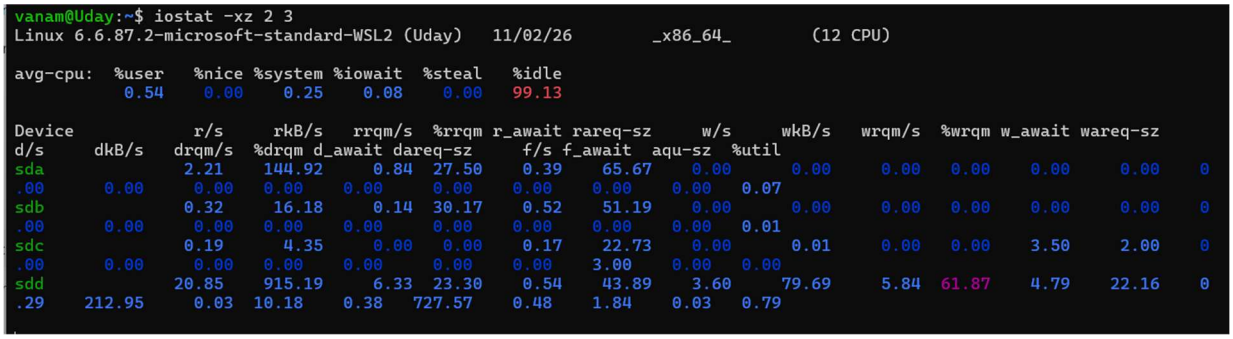

Displays memory, CPU, processes, and system performance statistics.

- `2` – Refresh every 2 seconds.
- `5` – Display 5 reports

2. iostat

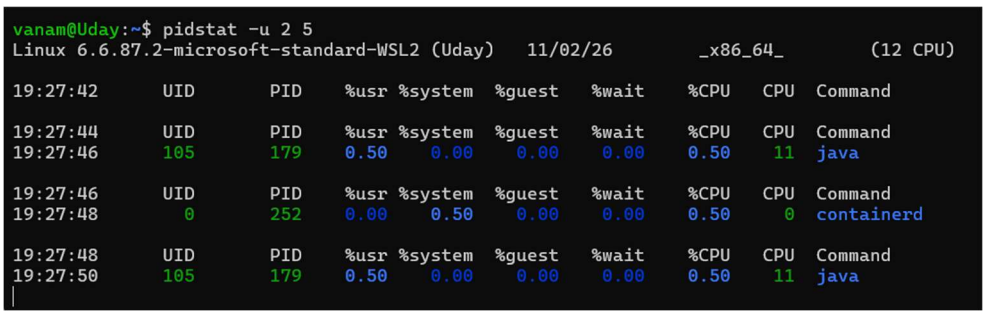

Monitors CPU utilization and disk I/O performance.

- `-x` – Extended disk statistics.
- `-z` – Hide inactive devices.
- `2 3` – Every 2 seconds, 3 reports.

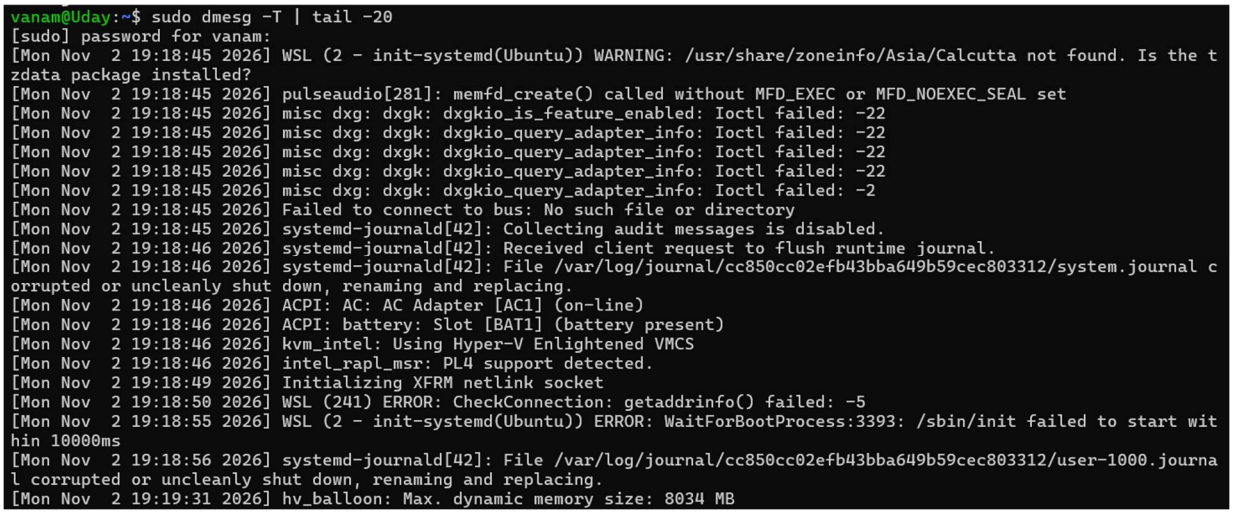

3. pidstat

Monitors resource usage by individual processes.

4. dmesg

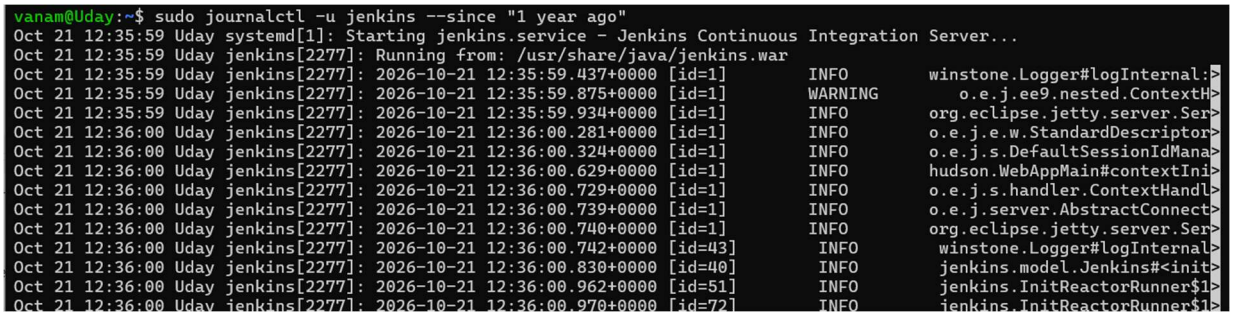

Displays kernel messages, useful for identifying hardware and boot-related issues.

- `-T` – Human-readable timestamps.
- `tail -20` – Last 20 messages.

5. journalctl

Checks system and service logs managed by systemd.

- `-u` – Specific service.
- `--since` – Filter logs by time.

6. findmnt

Displays mounted filesystems and their mount points.

```
vanam@Uday:~$ findmnt -t ext4,xfs
TARGET             SOURCE                  FSTYPE OPTIONS
/                  /dev/sdd                ext4   rw,relatime,discard,errors=remount-ro,data=ordered
├─/mnt/wslg/distro /dev/sdd                ext4   ro,relatime,discard,errors=remount-ro,data=ordered
└─/var/lib/docker  /dev/sdd[/var/lib/docker] ext4   rw,relatime,discard,errors=remount-ro,data=ordered
```

- `-t` – Filter by filesystem type.

7. du

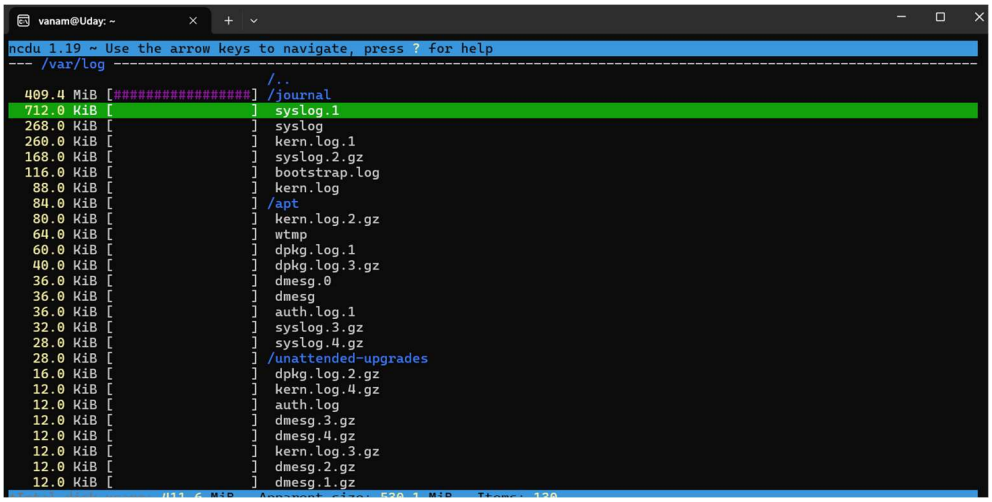

Identifies which directories consume the most disk space.

```
vanam@Uday:~$ sudo du -sh /var/log/*
0       /var/log/README
0       /var/log/alternatives.log
4.0K    /var/log/alternatives.log.1
4.0K    /var/log/alternatives.log.2.gz
4.0K    /var/log/alternatives.log.3.gz
76K     /var/log/apt
12K     /var/log/auth.log
36K     /var/log/auth.log.1
4.0K    /var/log/auth.log.2.gz
4.0K    /var/log/auth.log.3.gz
4.0K    /var/log/auth.log.4.gz
116K    /var/log/bootstrap.log
```

- `-s` – Summary for each directory.
- `-h` – Human-readable sizes.

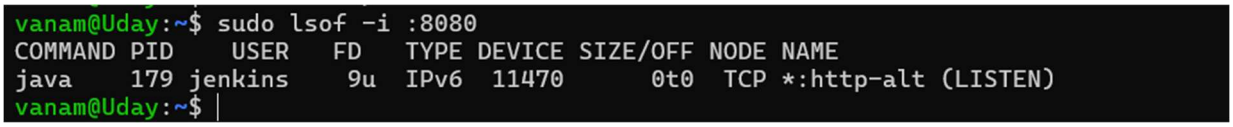

8. ncdu

Provides an interactive view of disk usage.

9. lsof

Lists open files and identifies which processes are using them.

10. fuser

Identifies processes accessing a particular file or port.
