1. lsblk

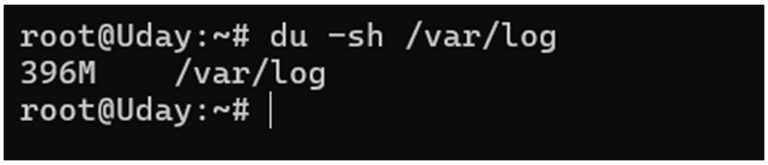

Displays block devices such as disks, partitions, and EBS volumes.

- -f — shows filesystem type, UUID, and mount points.

2. du

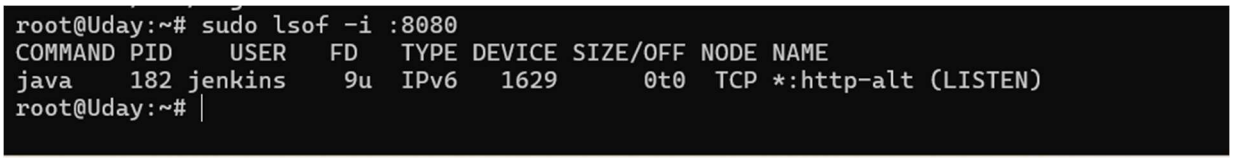

Checks how much disk space a directory occupies.

- `-s` — summary only.
- `-h` — human-readable sizes such as MB and GB.

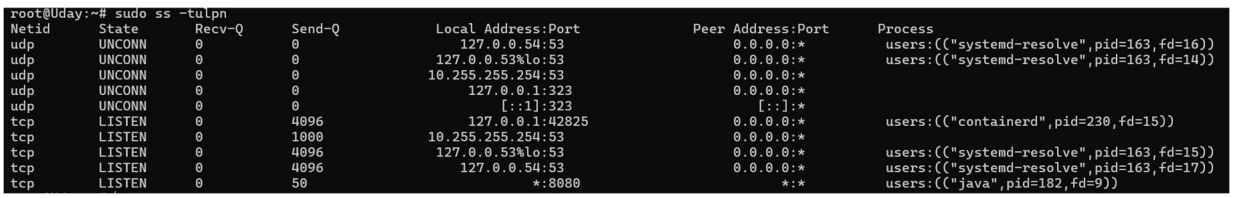

3. lsof

Lists open files and the processes using them.

4. ss

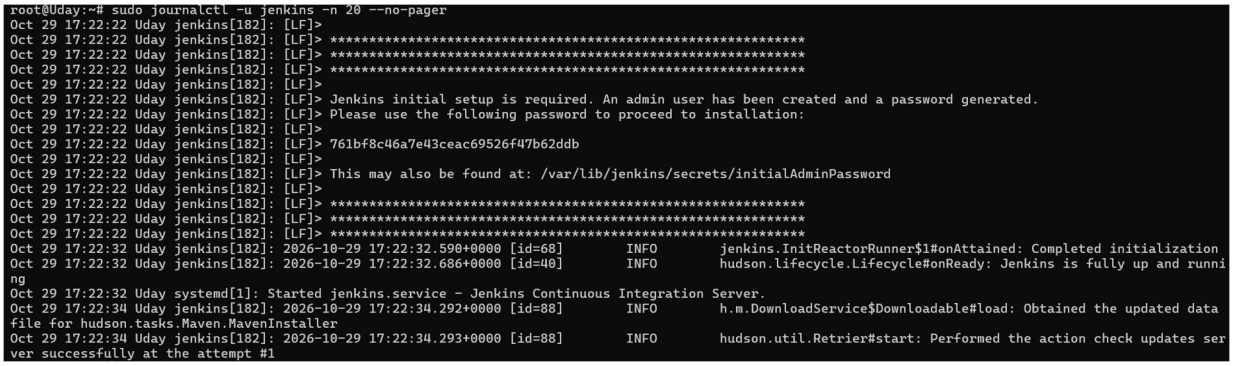

Displays network sockets and listening ports.

- `-t` — TCP sockets.
- `-u` — UDP sockets.
- `-l` — listening sockets.
- `-p` — process information.
- `-n` — numeric addresses and ports.

5. journalctl

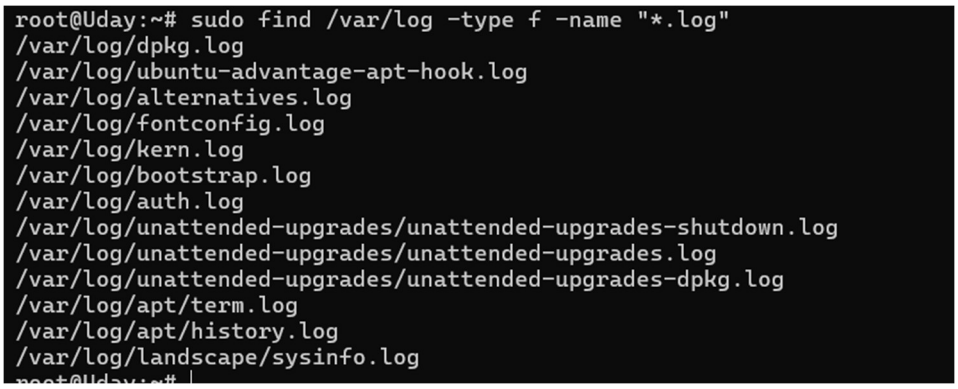

Reads systemd service and system logs.

- `-u nginx` — filters logs for Nginx.
- `-n 20` — shows the latest 20 lines.
- `--no-pager` — prints directly without opening a pager.

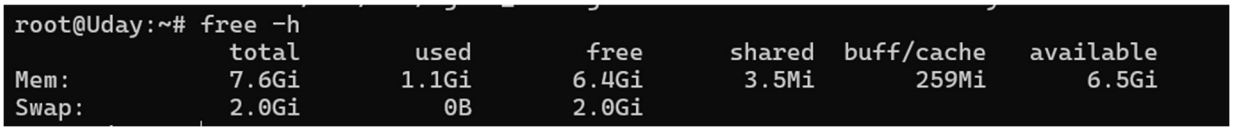

6. find

Searches for files based on their names and other properties.

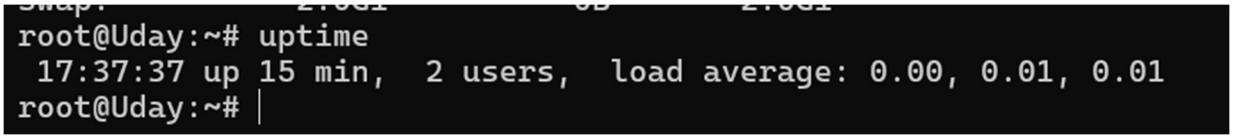

7. free

Shows RAM and swap memory usage.

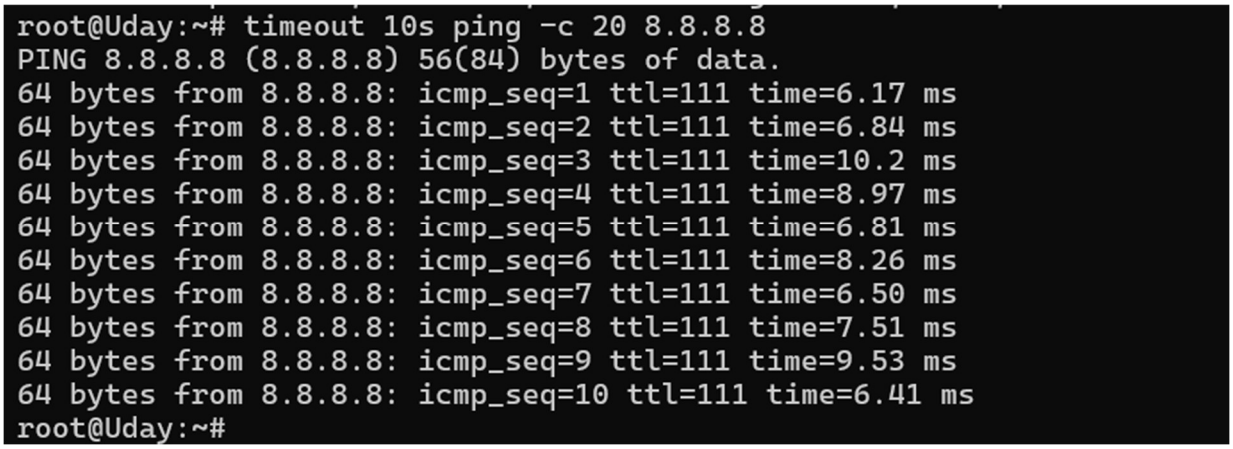

8.uptime

Displays how long the server has been running and its load averages.

9. timeout

Runs a command for a limited duration and stops waiting after the specified time.

10. namei

Shows each directory component along a file path and its permissions.
