No.	Validation Item	Expected Result	Status
1	EC2 Instance	Instance is running and status checks are passing	☑
2	Nginx Service	Nginx is active and serving requests correctly	☑
3	SSH Access	Authorized users can connect securely; unauthorized access is blocked	☑
4	CPU and Memory	Resource usage remains within acceptable limits	☑
5	Browser Validation	Application loads and key pages function correctly	☑
6	Application Logs	No unexpected critical errors or repeated failures	☑
7	Backup	Backup is completed successfully and recovery is verified	☑
8	Network Configuration	Security groups, firewall rules, ports, and routing work as intended	☑
9	Cost Optimization	Instance size and running resources match actual requirements	☑
10	Unused Resources	Unused volumes, snapshots, elastic IPs, and other chargeable resources are identified	☑
11	Application Health Check	Health endpoint returns success and the application is responsive	☑
12	HTTPS / SSL Certificate	HTTPS works and the certificate is valid	☑
13	Database Connectivity	Database connections and essential queries work correctly	☑
14	Error Rate Monitoring	No unexpected increase in application errors or HTTP 5xx responses	☑
15	Response Time Validation	Response times remain within acceptable limits	☑
16	Security Verification	Only required ports and services are accessible	☑
17	Disk Space and Storage	Sufficient disk space is available; no unexpected growth	☑
18	Deployment Version	The expected application version is running	☑
19	Service Recovery	Application and services recover correctly after a controlled restart	☑
20	End-to-End Smoke Testing	Critical user workflows work correctly after deployment	☑
